PERMEABILITY.

SUBUNIT: HOWODIMER, DISULFIDE-LINKED (BY SIMILARITY).

ALTERNATIVE PRODUCTS: THREE ISOFORMS (VEGF-190, VEGF-146 AND VEGF-166) ARE PRODUCED AS A RESULT OF ALTERNATIVE SPLICING OF THE SAME GENE. THE LONGER FORM CONTAINS A BASIC INSERT WHICH ACTS AS A CELL RETENTION SIGNAL.

PRISTURE SPECIFICITY: ABUNDANTLY AND EQUALLY EXPRESSED IN HEART AND LIVER. IN KIDNEY GLOMERULI, BRAIN AND YOLK SAC, VEGF-166 FORM IS TO 10- TIMES MORE ABUNDANT THAN THE VEGF-190 FORM.

TO 10- TIMES MORE ABUNDANT THAN THE VEGF-190 FORM.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    "Vascular endothelial growth factor (VEGF) and VEGF receptor (flk-1) are expressed during vasculogenesis and vascular differentiation in the quail embryo.";

- IS SUBCELLULAR LOCATION: SECRETED BUT REMAINS ASSOCIATED TO CELLS TO THE EXTRACELLULAR MATRIX UNLESS RELEASED BY HEPARIN.

- IT SISUE SPECIFICITY: ABUNDANTLY EXPRESSED IN HEART, BRAIN, KIDN AND SKELETAL MUSCLE.

- IT SIMILARITY: BELONGS TO THE PDGE/VEGF FAMILY OF GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TISSUE-BRAIN

J. Mol. Biol. 211:331-349(1990).

-i- FUNCTION: USED BY THE LARVAE TO CONSTRUCT A SUPRAMOLECULAR STRUCTURE, ITHE LARVAE TOBE. BALBIANI RING PROTEIN 3 COULD FROLE AS A TRANSPORT PROTEIN THAT BINDS TO OTHER PROTEINS INTERCELLULARLY AND IN THE GLAND LUMEN IN ORDER TO PREVENT FROM FORMING WATER-INSOLUBLE FIBERS TOO EARLY.

-i- TISSUE SPECIFICITY: SALIVARY GLAND.

-i- TISSUE SPECIFICITY: SALIVARY GLAND.

ALTERNATIVE PRODUCTS: THREE ISOFORMS (VEGF-190, VEGF-146 AND VEGF-166) ARE PRODUCED AS A RESULT OF ALTERNATIVE SPLICING OF THE SAME GENE. THE LONGER FORM CONTAINS A BASIC INSERT WHICH ACTS AS A CEIT SERVION SIGNAL.

FISSUE SPECIFICITY: ABUNDANTLY AND EQUALLY EXPRESSED IN HEART AND LIVER. IN KIDNEY GLOMERULI, BRAIN AND YOLK SAC, VEGF-166 FORM IS 5- TO 10- TIMES MORE ABUNDANT THAN THE VEGF-190 FORM.

DEVELOPMENTAL STRAGE: THE VEGF-166 FORM IS EXPRESSED EARLY AT DAY AND IS UPGRADED DURING GASTRULATION. EXPRESSION OF THE VEGF-190 FORM IS DETECTABLE ONLY FROM DAY 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SIMILARITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS
